

TQMLS102xA

For the networks of tomorrow

The Minimodule TQMLS102xA, based on the processor LS102xA from NXP, combines the ARM® core Architecture with the QorIQ® high speed communication technology. The integrated graphics controller supports applications with display and touch.

For various applications such as networking, industrial automation and controls with requirements for fast and secure data processing, there are three CPU variants available.

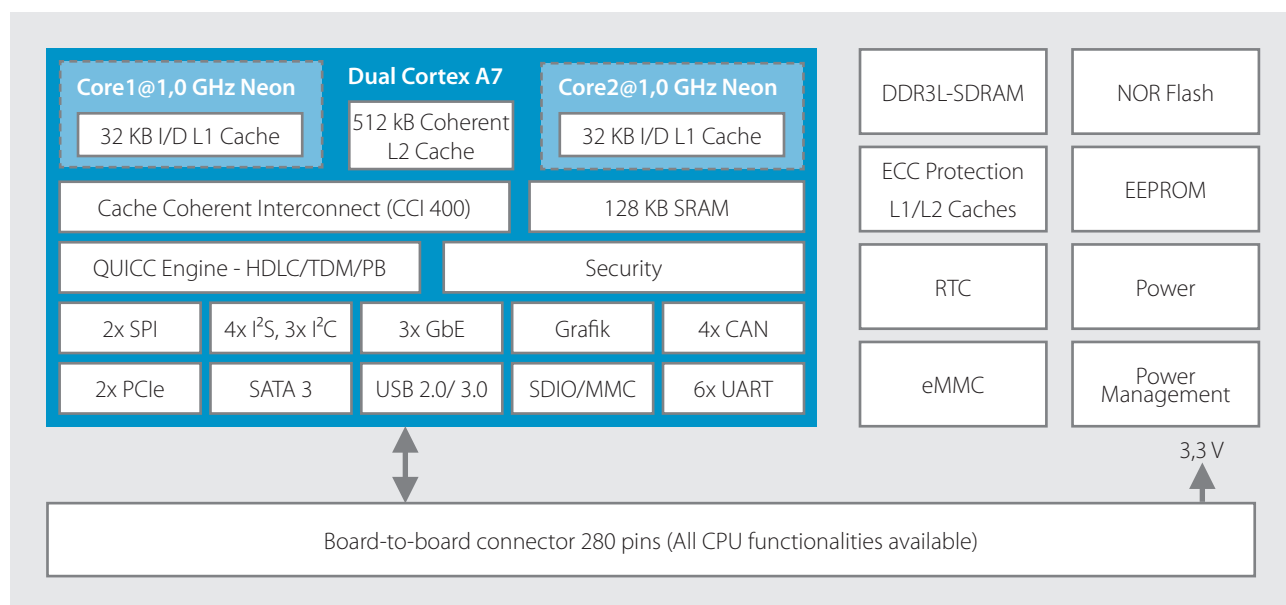

The Dual-Core ARM® Cortex™ A7 core provides a cache Coherent Interconnect bus system and a clock rate up to 2 x 1,0 GHz.

Thus the Embedded module TQMLS102xA- provides a balanced ratio between high performance and power dissipation.

The highlights:

- Graphic
- QorIQ QUICC Engine
- High speed communication via 3x Gigabit Ethernet, 2x PCIe and one USB 3.0 interface
- Low power consumption (typ. 3 W)
- ECC protection
- Cache Coherent Interconnect bus system
- IEEE 1588 hardware support
- Security functions
